PROFESSIONAL SUMMARY

Business Analytics and AI graduate with a Bachelor's degree in Software Engineering and hands-on experience in quality control, data-centre QA and warehouse leadership. Combines operational knowledge with SQL, data validation, KPI analysis, dashboard design, process automation and AI-assisted decision support. Built end-to-end academic solutions for accounts-payable automation and customer-retention analytics using PostgreSQL, Supabase, Google tools and generative AI. Seeking a junior or associate role in Business Analytics, Data Analysis, Business Intelligence, AI Automation or Process Improvement.

CORE COMPETENCIES

Business analytics | Data analysis | KPI reporting | Dashboard requirements | Data validation | Data quality | SQL | PostgreSQL | MySQL | Supabase | Microsoft Excel | Process mapping | Workflow automation | Requirements analysis | Root cause analysis | Quality assurance | Generative AI | Prompt engineering | AI governance | RLS and access controls | Stakeholder communication

TECHNICAL SKILLS

Data: SQL, PostgreSQL, MySQL, Microsoft Excel, data cleaning, validation, aggregation and KPI analysis

Analytics & Automation: dashboard design, Google Sheets, Apps Script, Google AI Studio, Gemini API, Lovable, Supabase

Development: Python (basic), Java, Kotlin, JavaScript, PHP, Node.js, HTML/CSS, REST APIs

Tools & Methods: Git, GitHub, Postman, Jira, Agile/Scrum, testing, technical documentation, process improvement

SELECTED BUSINESS ANALYTICS & AI PROJECTS

Revenue Guard - Customer Retention Analytics | MBA Capstone Project | UNIGRAN | 2026

- Designed an executive analytics solution for recurring revenue, churn risk, customer health scores and portfolio prioritisation using PostgreSQL, Supabase and Lovable.
- Built KPI dashboards, risk segmentation, customer 360 views and an AI-assisted retention workflow with mandatory human approval and an immutable audit trail.
- Applied SQL views, row-level security, data governance and Gemini-based recommendations to support traceable business decisions.

Aurora - Accounts Payable Automation | MBA Applied Project | UNIGRAN | 2026

- Automated extraction, validation and classification of 494 accounts-payable records using Google Sheets, Apps Script and generative AI.
- Defined business rules, exception handling, validation checks and management reporting to reduce manual work and improve data consistency.

PROFESSIONAL EXPERIENCE

Warehouse Supervisor | A2Global Electronics + Solutions | Hoofddorp, Netherlands | Sep 2025 - Present

- Supervise daily warehouse operations, workflow priorities and team coordination in a time-critical international electronics environment.
- Use operational records and quality information to identify issues, maintain process discipline and support accurate, on-time execution.
- Coordinate issue resolution and communicate priorities across warehouse, quality and stakeholder teams.

Quality Control Inspector | A2Global Electronics + Solutions | Hoofddorp, Netherlands | Apr 2022 - Aug 2025

- Inspected electronic products against customer specifications and documented quality results, discrepancies and traceability information.
- Investigated non-conformities, supported corrective actions and helped improve consistency across operational processes.

Pick & Pack / Warehouse Operator | Nissan Motor Corporation | Netherlands | May 2019 - Apr 2022

- Performed order picking, packing, receiving, storage and shipping while maintaining inventory accuracy and delivery-quality standards.
- Supported stock control, team coordination and continuous-improvement activities in a high-volume logistics operation.

Data Centre QA / Server Hardware Tester | Material in Motion - Google programme | Netherlands | Sep 2017 - May 2019

- Tested and quality-checked server hardware manufactured for Google data-centre environments, following controlled procedures and technical standards.
- Documented results, verified component traceability and escalated defects to protect product reliability and process compliance.

EDUCATION

MBA in Artificial Intelligence and Business Analytics | UNIGRAN | Brazil | Completed Sep 2026

Coursework: business analytics, data-driven decision-making, AI strategy, predictive analytics, dashboard design, prompt engineering, process automation and AI governance.

Bachelor's Degree in Software Engineering | UNIGRAN | Brazil | Completed Jun 2025

Coursework: software design, databases, requirements analysis, software testing, web and mobile development, programming logic and Agile delivery.
